Prescribe Kinect Description

Installation Instruction
- Requires Window 8 or higher with visual studio and Kinect SDK installed to run
- Open prescribe.sln file and click "Run."

General Overview
- This window application is purposed to track and debug the Kinect status and functionality as the part of the service.
- Kinect gets user's face when requested to request how many pills to dispense.
- There is no interaction in the UI, and UI is just for debugging information.
